

Grade 6

December Newsletter

LANGUAGE ARTS

The students have done and started a plethora of activities and projects this month in class. They've learnt how to write poems, surreal fictional stories, book reviews, as well as writing constructive feedback. They've been creating their own film/production in groups, with a notion they came up with, while also preparing a persuasive speech presentation. The fun doesn't stop there. The students have learnt to read theatrically, write better and more complex sentences using a new list of subordinating conjunctions and 4-5 syllable adverbs and last but not least they've been doing Christmas activities. Designing posters and creating Christmas party invitations.

MATHEMATICS

Students continue to review fractions, decimals and percentages. We completed task cards and worked to switch seamlessly between fractions and decimals and visa versa. We played Jeopardy games in order to practice all different types of problems.

HISTORY

Students have been looking at the geography of the United States and Canada. They completed several digital scavenger hunts with a partner in order to learn a little bit about the different states and regions. We also looked at the system of governance in America, outlining the three branches of government.

SCIENCE

We have learnt a lot about different kinds of animals in this last period. Last week, we wrapped up the most important elements and students were tasked to complete a graded assignment in which the differences between animals had to be named and identified. We are excited to learn more about this daunting, yet fascinating topic.
