Newsletter Grade 7

Language Arts

The students have been preparing for the Spelling Bee competition, writing informative essays and the students also attended a workshop this month with a grade 7 class from another school. The students did a lot of fun filled activities in the workshop. They thoroughly enjoyed it.

Math

Students continue working on the equations unit. We are adding like terms and practicing balancing equations in order to find the missing variable. Students worked in groups on a maze activity that helped to practice and solidify their understanding.

Science

This month, we studied the excretory system and how the body removes waste. Students learned about the organs involved in filtration and excretion, including the kidneys, liver, and skin. In-class assignments helped reinforce these concepts and checked for understanding.

History

Students continue to work on their Google Slides presentations. They are researching: the Situation Before the War, New Weapons During WWI, the Western Front, and the Eastern Front. Students are working to present the information in a concise and clear way to their classmates.
